

Statewide CASM Governance Proposal

What is CASM?

- Communications Assets Survey and Mapping tool
- Web-based tool used to store and update radio communication infrastructure
- Assesses current interoperable communications capability between chosen localities

Levels of Access

State/Local Area Access-“Full Access”

- Can enter and edit data on behalf of the State/Local Area
- Can display all data graphically for analysis

Agency Access-Full Agency Access/“Read Only” beyond

- Can enter and edit data on behalf of the assigned agency
- Can view all data and display it graphically for analysis

CAM Only Access-“Read Only”

- Can view and display information graphically for analysis

Proposed Governance Structure

State Arbiter/Manager: Potentially jointly held by OES and OHS, this position administers all state agency accounts and maintains records of all users statewide. This position has no authority over granting or administering regional accounts.

Local Area Managers: Based upon the CALSIEC planning areas, local accounts will be governed regionally. While reporting to the State Arbiter, these regions will maintain autonomy in both approving and administering accounts.

Guidance Committees: There are two proposed guidance committees; one committee to help the State Arbiter with technical decisions as they arise, and another committee to help define exactly what data will be inputted. Right now it is proposed that only interoperability data be entered.
